13.7 Consider a system that supports 5,000 users. Suppose that you want toallow 4,990 of these users to be able to access one file.

  a. How would you specify this protection scheme in UNIX?

  b. Can you suggest another protection scheme that can be used more effectively for this purpose than the scheme provided by UNIX?

答:

  a. 创建 4990 条 ACL 或者将 4990 用户放在同一个组中，对这个组进行访问设置。

  b. 默认都可以访问，但是添加10个用户的"黑名单"。
